

EECS E6893 Big Data Analytics - Fall 2023

Homework Assignment 4: Generative AI

Due Friday, December 1st, 2022, by 5:00pm

Assignment 4 guidelines:

Only submit one PDF file with screenshots of your code, brief explanation of the code and the results

Some helpful links for you:

Transformers library: <https://pypi.org/project/transformers/>

Peft library: <https://pypi.org/project/peft/>

Trl library: <https://pypi.org/project/trl/>

LangChain: <https://www.langchain.com/>

Task 1 (25 pts)

In this part you are going to answer questions based on some basic definitions of Large Language Models (LLMs) first. Then you should try to deploy Falcon-7b on Google Colab (GPU runtime) and get inference from the model.

Q1.1 Respond with insights grounded in the terminology of Large Language Models. (15 pts)

- (1). Can you provide a high-level overview of Transformers' architecture?
- (2). What are the two approaches for evaluating language models in NLP, providing brief descriptions of each method along with highlighting their key distinctions?
- (3). What is a token in the Large Language Models?

Q1.2 Read through the tutorial slides and deploy Llama 2 on Google Colab and get inference from the model. (10 pts)

- (1). Provide screenshots of the results after you successfully download the model and see the text generated.
- (2). Change the "max_length" variable in pipeline and observe the difference.

Task 2 (50 pts)

In this part you are going to fine tuning Llama 2 models based on OpenAssistant dataset.

Q2.1 Write comments for each line of code and succinctly explain what it is doing.

Q2.2 Make a training loss plot.

Q2.3 Use the text generation pipeline to ask questions like “What is a large language model?”

Q 2.4 Store fine-tuning Llama2 Model and push Model to your Hugging Face Hub. Provide screenshot of your Hugging Face model page.

Task 3 (25 pts)

In this section, your objective is to leverage the fine-tuning model from Task 2 to construct a versatile chatbot utilizing LangChain.

Q3.1, Provide screenshots of the prompt template you have devised.

Q3.2, Provide the text generation outcomes achieved through your chatbot.
